si-Cluster Strategy and Business Plan

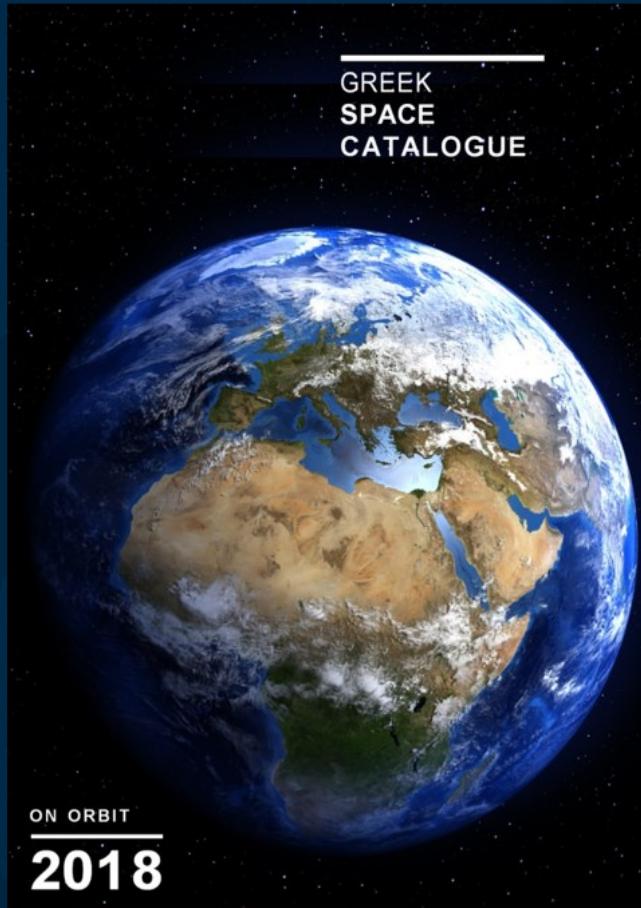

The Greek Space Technologies and Applications Cluster... On orbit

The si-Cluster (www.si-cluster.gr) is an emerging, industry-led and user-driven innovation cluster focusing on Space Technologies and Applications in Greece. It was established in 2008 as a joint initiative between Corallia (www.corallia.org) and the Hellenic Association of Space Industries – HASI (www.hellenic-asi.org).

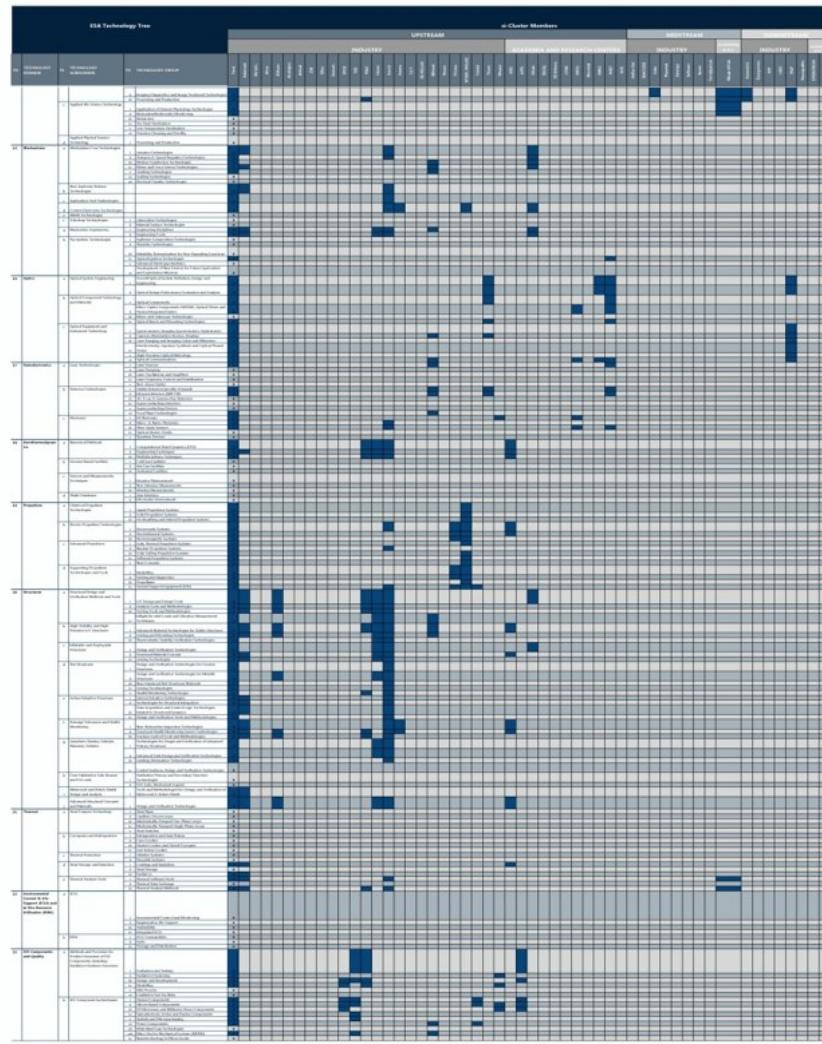

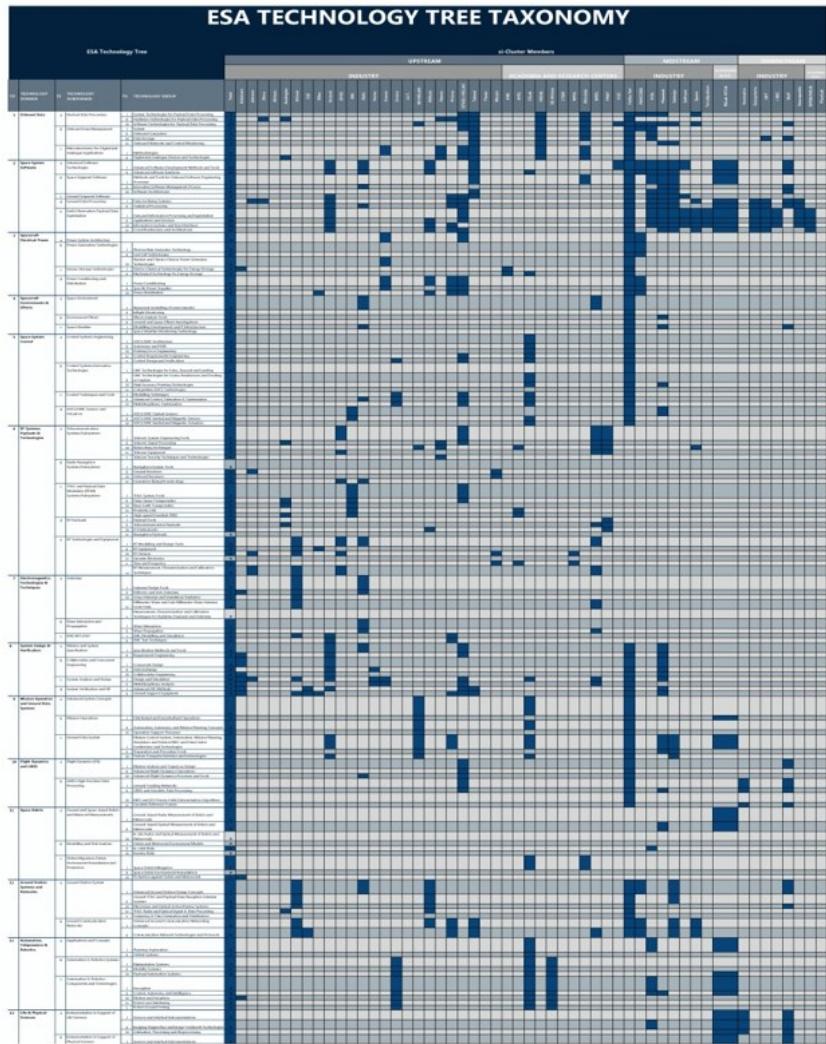

Greek Space Catalogue

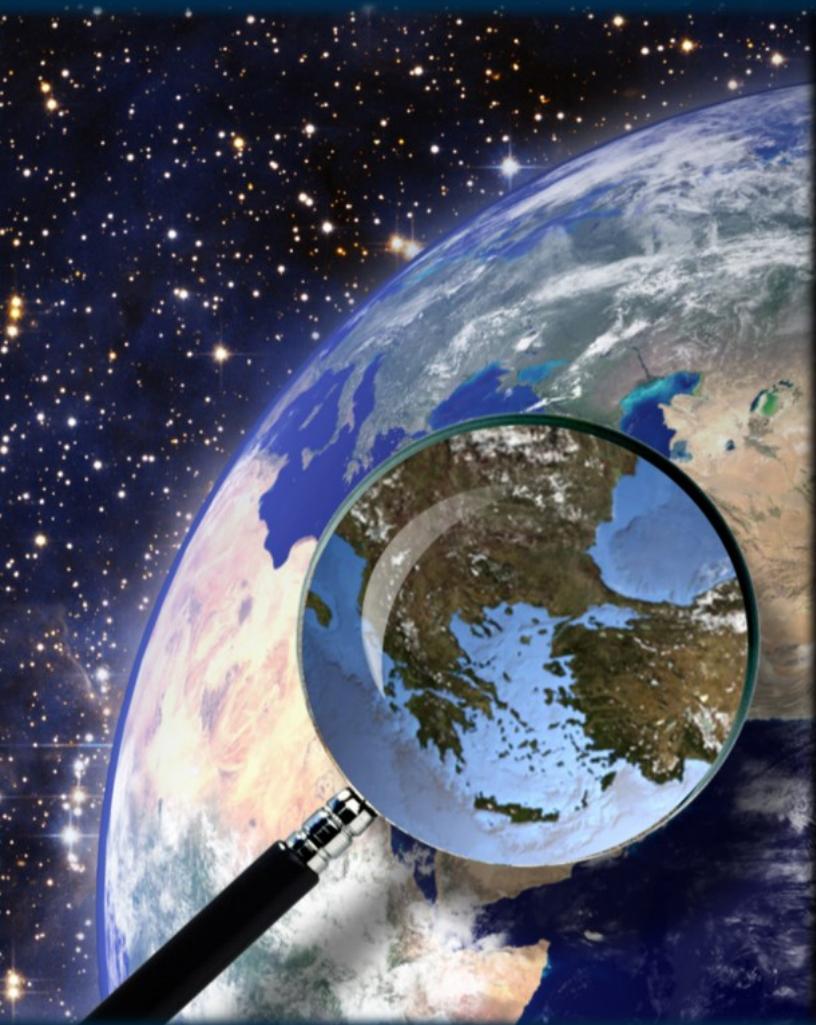

Product & Technology Tree Taxonomy

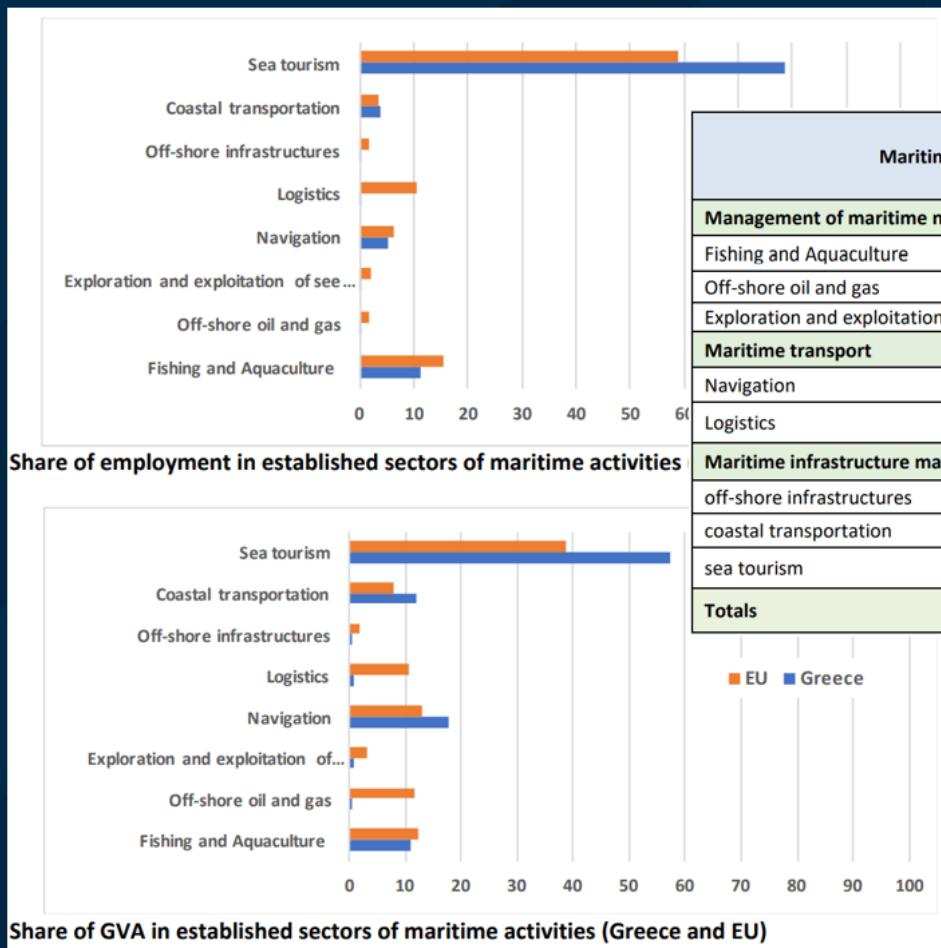

The Greek Blue World

- Greece is the **world fleet leader in dead-weight tonnage lead**, with a share of 17.3% of world total in 2017, followed by Japan (11.7%) and China (9.6%).
- In terms of **commercial value of the world fleet**, Greece ranks **third**, with a value close to 86 billion USD, behind the United States and Japan that have value close to 90 billion USD.
- The shipping industry is by far the **most extrovert sector** of the Greek economy.
- The inflows from shipping activities account for approximately **6.5% of Greek GDP** and also have a substantial indirect multiplier effect on the Greek economy.

The Greek Blue World

Maritime area / sub-sector	Greece		EU	
	Employment (thousands)	GVA (EUR million)	Employment (thousands)	GVA (EUR million)
Management of maritime natural resources				
Fishing and Aquaculture	38,10	637,00	571,48	20.681,00
Off-shore oil and gas	0,20	8,00	62,83	19.681,00
Exploration and exploitation of see floor	0,90	46,00	81,57	5.576,00
Maritime transport				
Navigation	17,70	1.025,00	232,24	21.944,00
Logistics	1,30	54,00	384,52	18.094,00
Maritime infrastructure management and spatial planning				
off-shore infrastructures	1,40	13,00	65,17	3.225,00
coastal transportation	12,80	699,00	124,38	13.121,00
sea tourism	266,30	3.342,00	2.174,73	65.116,00
Totals	338,70	5.824,00	3.696,91	167.438,00

Space4Maritime.gr – Objectives

I000128132/19/F/MOS Space and Maritime: Analysis of Requirements in Greece

Space4Maritime.gr

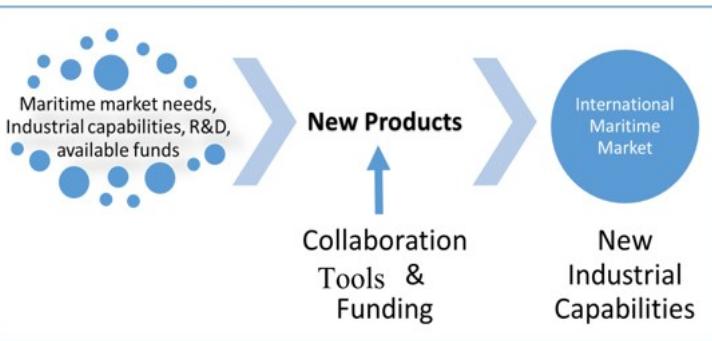

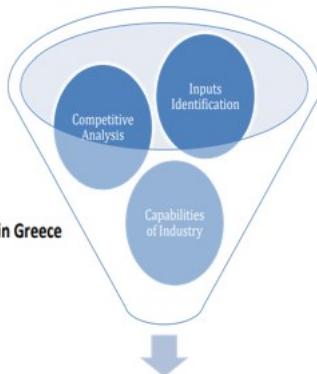

ESA Ref:
4000128132/19/F/MOS

Subject:
Space and Maritime: Analysis of Requirements in Greece

Project Title:
Space4Maritime.gr

Date:
6 March 2020

Final Report

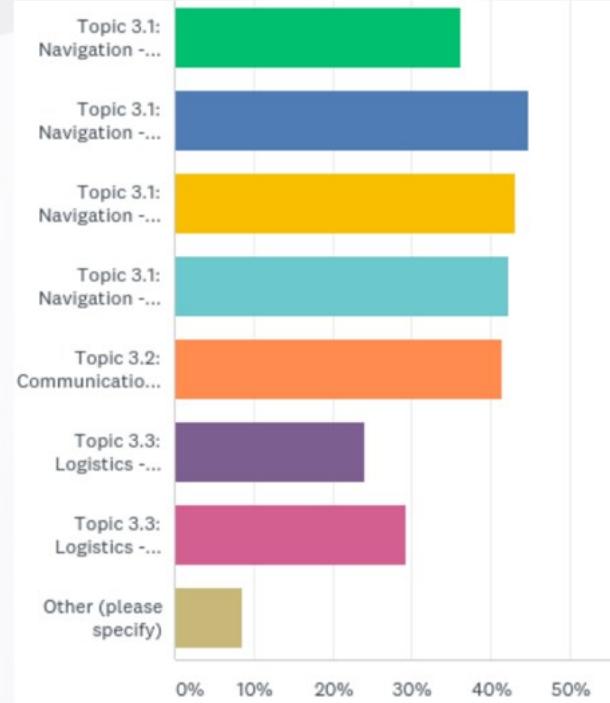

- To identify, analyse and prioritise the **needs of the maritime sector** in Greece which could benefit from space infrastructure and translate them into a list of user **requirements**
- To make an analysis of the current capacity of the Greek industry to satisfy these requirements and of the **existing solutions** (Greek, European or worldwide)

Space4Maritime.gr – Thematic Areas

- Management of maritime natural resources
- Maritime monitoring for safety and security
- **Maritime transport**
 - **Navigation**
 - **Communication**
 - **Logistics**
- Protecting the ocean
- Ocean science
- Maritime infrastructure management and spatial planning

- ✓ “desk research”
- ✓ 221 on-line
questionnaire responses
- ✓ 33 **interviews**
- ✓ 118 **needs**

ANSWER CHOICES	RESPONSES
Topic 3.1: Navigation - Activity 3.1.1: Operations	36.21% 42

3. Autonomous Shipping
4. Satellite-based solutions
5. Space-based solutions

4 degrees of autonomy

- 1st degree: Ship with automated processes and decision support
 - 2nd degree: Remotely controlled ship with seafarers on board
 - 3rd degree: Remotely controlled ship without seafarers on board
 - 4th degree: Fully autonomous ship

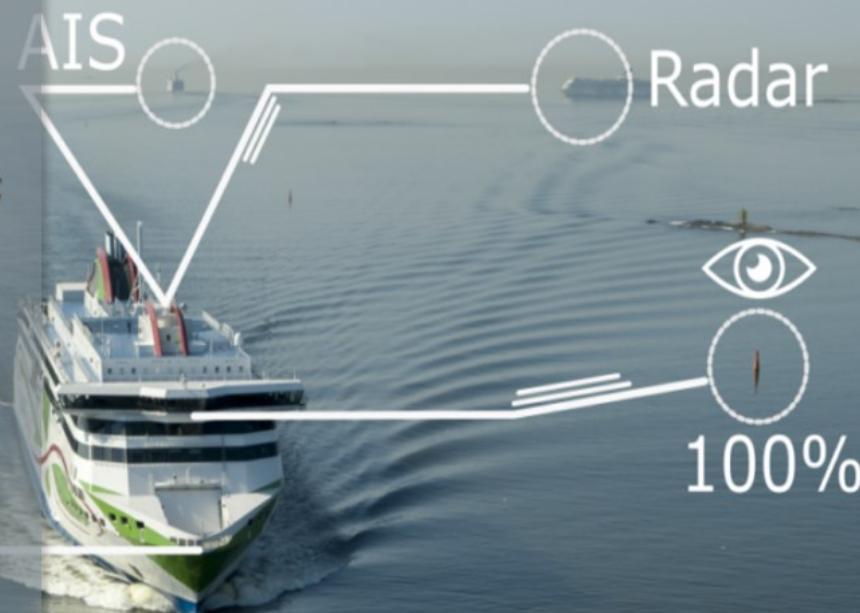

Requirements for Autonomicity

Sensing...

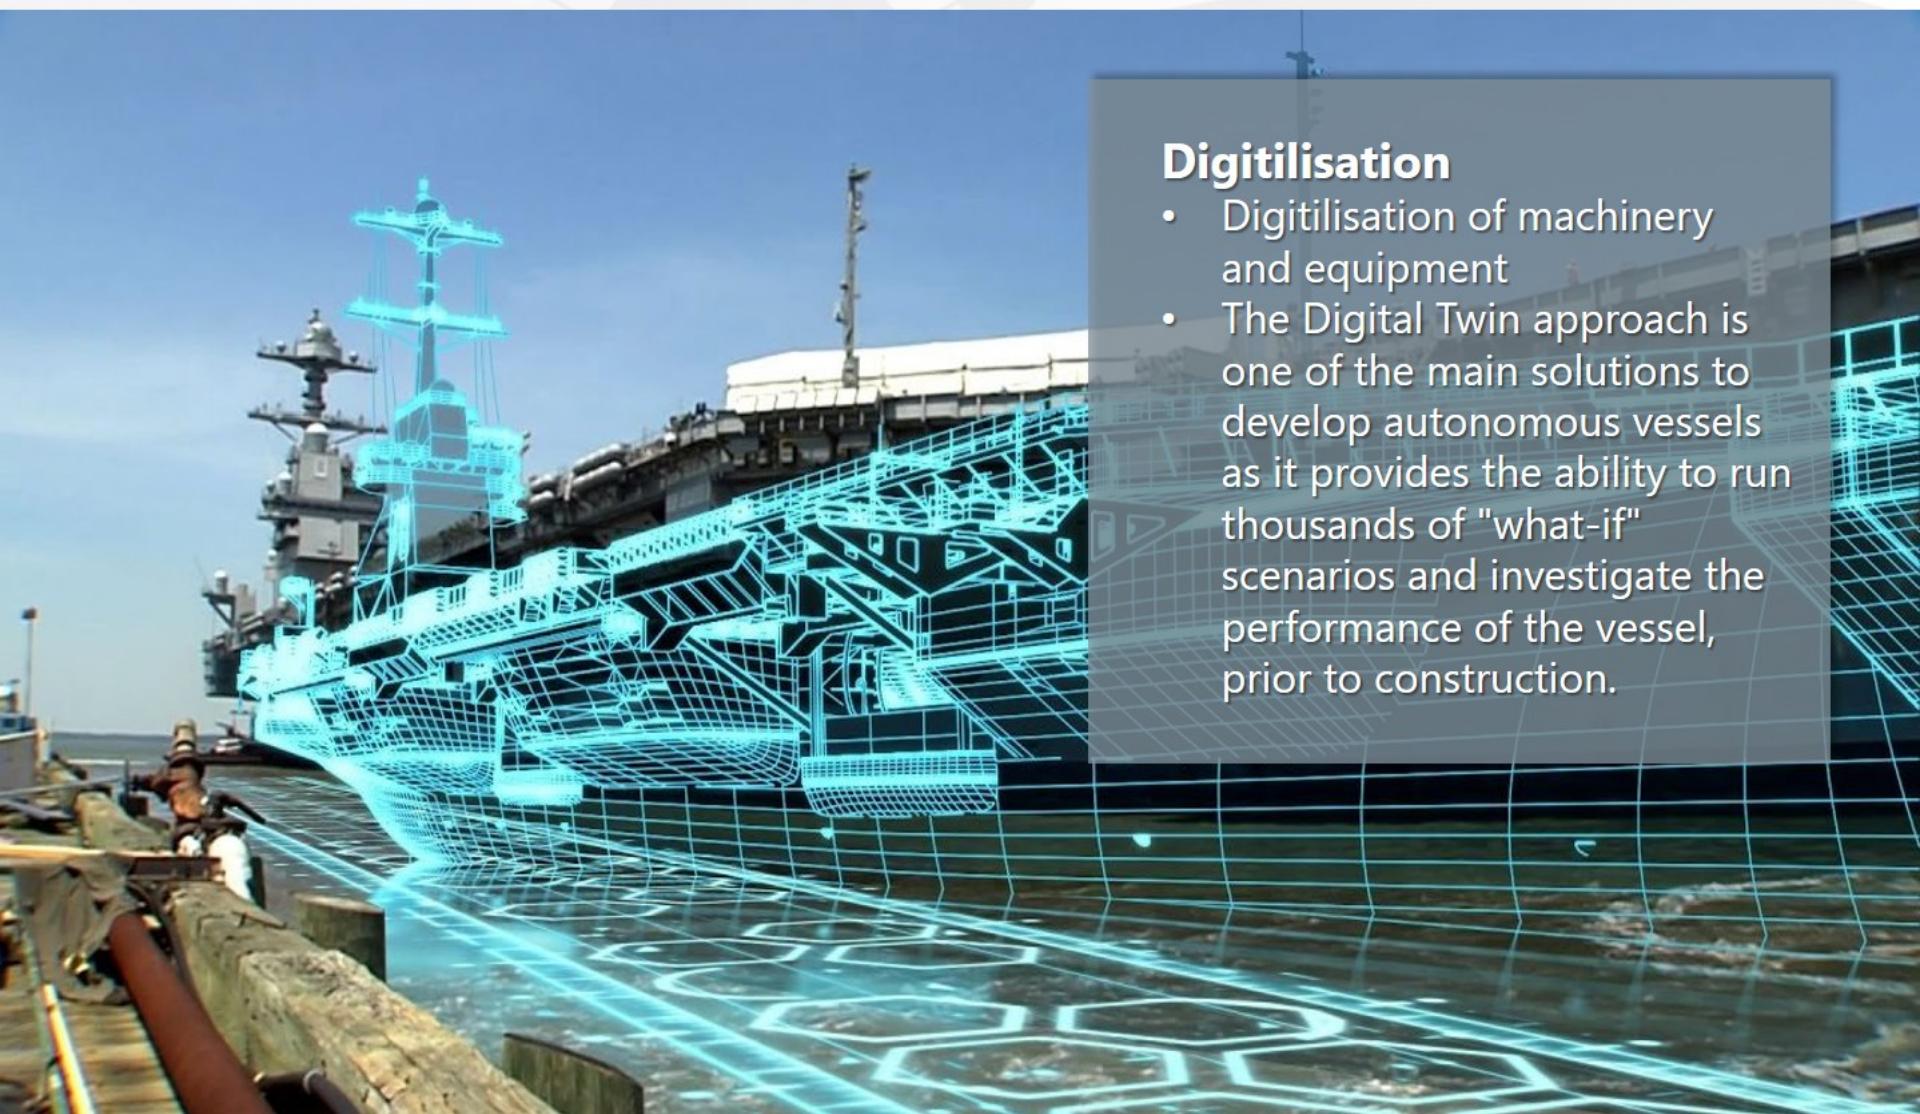

- IoT devices;
- magnetic sensors (e.g. for steering navigation);
- cameras and thermal cameras;
- Short-Range Radar;
- Optical and LIDAR systems;
- **EO data with higher frequency.**

... & Connectivity

- IoT systems & Connectivity;
- LoRa systems;
- data acquisition systems (DAS - on the ship and at the shore).

Requirements for Autonomicity

Digitilisation

- Digitilisation of machinery and equipment
- The Digital Twin approach is one of the main solutions to develop autonomous vessels as it provides the ability to run thousands of "what-if" scenarios and investigate the performance of the vessel, prior to construction.

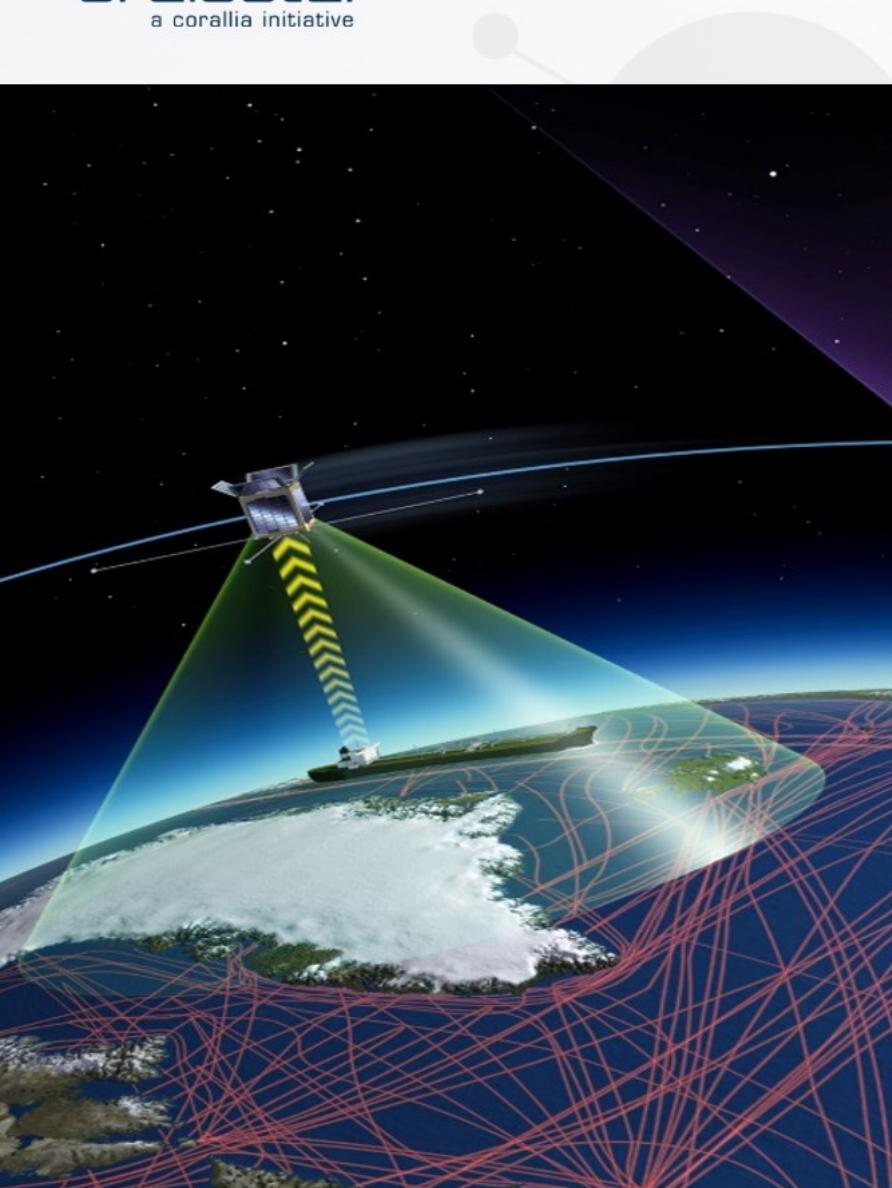

Requirements for Autonomicity

Monitoring, Data Analysis, and Smart & Cognitive systems

- Computer vision (e.g. in autonomous navigation for vessels equipped with camera sensors for gathering data); data analysis on systems behaviour;
- Big Data Analytics;
- AI based situational awareness;
- AI-based decision making;
- AI based automatic maneuvering;
- AI deep learning;
- Efficient Optimal Navigation Control Algorithms;
- Proactive and Reactive cognitive systems;
- Predictive Maintenance of machinery.

Requirements for Autonomicity

Positioning-Navigation-Timing (PNT) & Communication

- GNSS; path planning and precision navigation even in the conditions of unavailability of time / positioning signals.
- Information Relay; Satellite communications; BLoS Communications; Delay Tolerant Satellite Networks; Remote operations and control (Telemetry - Telecommand) through satellite link.
- Cooperative sailing in swarms (i.e. 3 ships together) including ship to ship transfers; Inner-port autonomous operation; vessel auto-piloting and auto navigating by autonomous swarm of tugboats within port limits.

Requirements for Autonomicity

Other technologies...

- Robotic-based maintenance and repairs.
- On-board automatic 3D-printing.
- UAVs, auto-crawlers, sea drones and sub drones for e.g. inspection, cleaning, etc. (of the hull, the tank, etc.)
- Augmented Reality for enhanced monitoring.
- Cybersecurity.

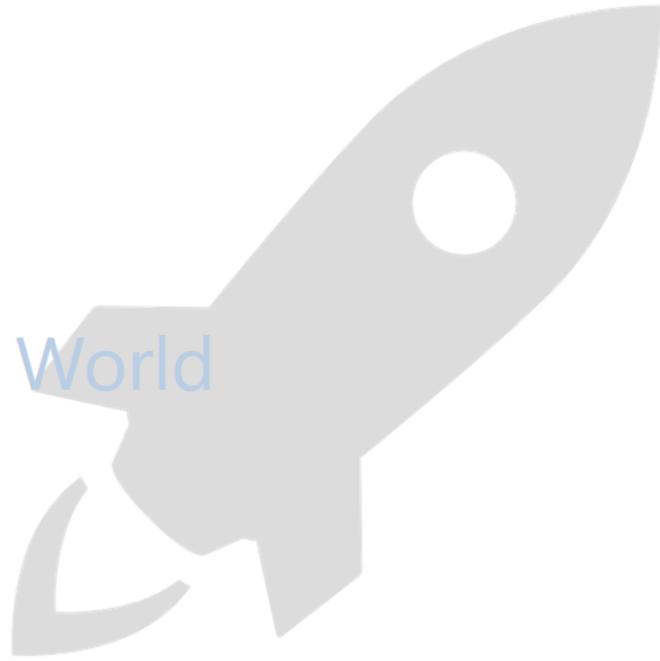

Requirements for Autonomicity

... and beyond technologies

- Funding and R&D.
- Integrated applications combining space, air and ground technologies.
- Test Sites.
- National & International regulations

1. The si-Cluster & the Greek Blue World
2. Space4Maritime.gr Study
3. Autonomous Shipping
4. Satellite-based solutions
5. Space-based solutions

Satellite-based solutions

Satellite
Communications
(SatCom)

Satellite
Navigation
(SatNav)

Satellite
Earth Observation
(SatEO)

Implemented by
MERCATOR OCEAN
INTERNATIONAL

TRADE & MARINE NAVIGATION

- Marine forecasts, natural disaster prediction and early warnings.
- Accurately monitor weather conditions for route optimization purposes
- Wave's direction/speed/wavelength; Maritime thunderstorms monitoring; Monitor shape and state of icebergs above and below the sea surface and issue timely warnings.

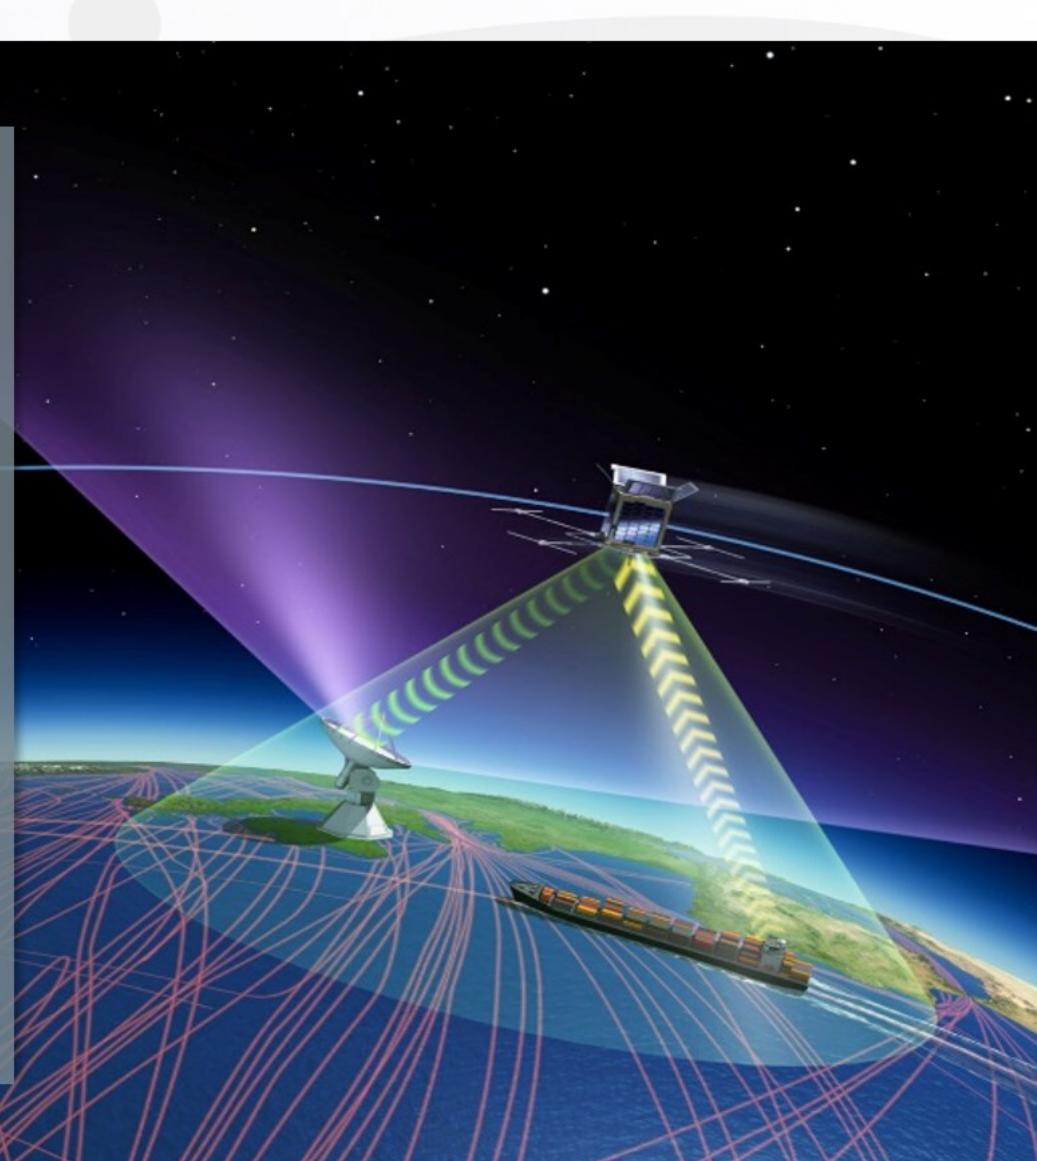

- Identify vessels with no AIS
- Improve temporal resolution of EO data regarding illegal activities detection
- Spot and trace fallen containers

AVAILABLE
VARIABLES

SatCom & NavCom solutions

- Allows track and trace of vehicles, people and assets
- Allows navigation of autonomous vehicles in the open ocean and at ports.
- Enhanced Satellite Automatic Identification System (S-AIS).
- Collisions avoidance.
- Enable M2M in remote areas
- ESA's initiative Space for 5G (S45G).
- European Space Agency has initiated a new ARTES Strategic Programme Line dedicated to "Space Systems for Safety and Security (4S)"

1. The si-Cluster & the Greek Blue World
2. Space4Maritime.gr Study
3. Autonomous Shipping
4. Satellite-based solutions
5. Space-based solutions

Space-based solutions

Space can be used to support the transition to full autonomous shipping through, not only **satellite navigation** and **telecommunications**, as well as **Earth Observation** services...

... but also through **other technologies and processes** developed for operating satellites and spacecraft in harsh environments.

Other Space Solutions
